Profile

Data Analyst specializing in marketing analytics — campaign performance, funnel analysis, cohort retention, and customer segmentation. Delivered projects with measurable business context: 65x ROAS channel comparison, ₹1.05 Cr recoverable ARR from churn analysis, and KPI dashboards designed for operational reporting. Skilled in SQL, Power BI, Python, and GA4

Skills

- Reporting & BI** — Power BI, DAX, Power Query, Tableau, KPI Dashboard Design, Advanced Excel
- Query & Analysis** — SQL, MySQL, Joins, Subqueries, Window Functions, Aggregations, CASE Statements
- Marketing Analytics** — GA4, Conversion Tracking, Campaign Performance, ROAS, CAC, LTV, Funnel Analysis, Cohort Analysis, Customer Segmentation
- Data Quality** — Data Cleaning, Missing Value Treatment, EDA, Anomaly Detection, Data Standardization
- Tools** — MySQL Workbench, Python, Pandas, NumPy, GitHub, MS Office

Projects

Digital Marketing Campaign Performance Analysis | Python · SQL · Power BI 🔗

<https://github.com/Disha-Tarlekar/marketing-campaign-analysis>

- Generated a 10,000-record synthetic digital marketing dataset in Python to simulate campaign performance across Google Ads, Meta Ads, and Email channels.
- Analyzed channel, segment, and monthly trends using SQL to evaluate ROAS, CAC, and revenue performance.
- Identified Email as the best-performing channel with 65x ROAS and ₹59 CAC, compared with Meta Ads at 23x ROAS and ₹138 CAC.
- Found Email + New Customer as the highest-performing segment combination with 66.93x ROAS and recommended budget reallocation toward high-ROI channels.
- Built a Power BI dashboard with spend, revenue, ROAS, and CAC KPIs to support marketing performance monitoring and decision-making.

RetainIQ — Customer Churn Intelligence Dashboard | SQL · Python · Power BI · DAX 🔗

<https://github.com/Disha-Tarlekar/RetainIQ-Churn-Intelligence>

- Cleaned and standardized 7,500 synthetic B2B SaaS customer records in MySQL — resolved null values in NPS and support ticket fields, corrected plan type casing inconsistencies, and enforced full data hygiene before any reporting.
- Built a 4-page Power BI dashboard with 4 KPIs (Churn Rate 38.7%, ARR Loss ₹3.45 Cr, Total Customers, Active Customers) and interactive slicers across plan type, region, and industry vertical — designed for recurring operational reporting, not one-time analysis.
- Defined and documented 5 business metrics — churn rate, ARR loss, CAC wasted, ARR at risk, and high-risk customer definition — ensuring consistent interpretation across all 4 dashboard pages.
- Used SQL aggregations to calculate ARR loss per segment — surfacing that Basic plan customers drive 64.6% of total revenue loss despite being the lowest-revenue tier, giving every finding a rupee-cost business context.
- Proposed 3 targeted retention strategies — annual contract push, tenure milestone rewards, and proactive CSM outreach to high-risk monthly customers — with estimated recoverable ARR of ₹1.05 Cr backed by cohort and contract-type analysis.

Education

B.Sc. Information Technology Mumbai University CGPA: 9.37	04/2025
Higher Secondary Certificate (HSC) Maharashtra State Board 79.67%	03/2022
Secondary School Certificate (SSC) Maharashtra State Board 93.00%	03/2020

Certificates

• Reports & Dashboards for Lightning Experience, Salesforce Trailhead (CRM Reporting, Real-Time Dashboard Design, Data Filters & Segmentation, Business Metrics Visualization — Salesforce Lightning Experience)	06/2026
• Google Analytics Certification, Google (GA4 · Traffic Analysis · Conversion Tracking · Audience Segmentation)	05/2026
• Data Analysis with Python, IBM (Pandas · NumPy · Matplotlib · EDA · Statistical Analysis)	12/2025
• Professional Certification in Data Science & Data Analytics, Itvedant Education Pvt. Ltd (SQL · Power BI · Excel · Data Modeling · ETL Concepts)	12/2025
